

ERP Recruitment Module & Applicant Job Portal Documentation

1. System Overview

The ERP Recruitment Module is designed to manage the complete recruitment lifecycle from manpower request until employee onboarding and employee creation.

The system includes:

- ERP Recruitment Portal (Internal)
 - Applicant Job Portal (External)
 - Maker-Checker Approval Workflow
 - Applicant Tracking System
 - Interview & Offer Management
 - Onboarding Module
 - Employee Conversion Module
 - Reporting & Dashboarding
-

2. Main Objectives

The solution aims to:

- Digitize recruitment operations
 - Enforce governance and approval controls
 - Streamline hiring workflows
 - Provide a centralized applicant tracking system
 - Automate onboarding and employee creation
 - Reduce manual HR operations
 - Improve hiring visibility and reporting
-

3. User Roles

Internal Users

Role	Responsibility
HR Maker	Creates job requisitions
HR Checker	Reviews and approves jobs

Role	Responsibility
Hiring Manager	Requests manpower and reviews candidates
Interviewer	Conducts interviews
HR Admin	Manages HR configuration
System Admin	Manages users and security

External Users

Role	Responsibility
Applicant	Applies for jobs
New Hire	Completes onboarding

4. High-Level Recruitment Flow

flowchart TD

```

A[Hiring Need Identified] --> B[HR Maker Creates Job Requisition]
B --> C[Submit for Approval]
C --> D{Checker Decision}
D -->|Approve| E[Publish Job]
D -->|Reject| F[Return for Revision]
E --> G[Applicant Applies]
G --> H[Interview Process]
H --> I[Offer Issued]
I --> J[Onboarding]
J --> K[Employee Created]

```

1. Hiring need identified
2. HR Maker creates job requisition
3. Job submitted for approval
4. HR Checker approves/rejects request
5. Approved job published to portal
6. Applicant registers and applies
7. HR screens applications
8. Interview conducted
9. Offer generated
10. Applicant accepts offer
11. Onboarding initiated
12. Employee record created

5. Maker Checker Workflow

```
flowchart TD
    A[HR Maker Creates Job] --> B[Save Draft]
    B --> C[Submit for Approval]
    C --> D[HR Checker Reviews]
    D --> E{Approve?}
    E -->|No| F[Reject with Comments]
    F --> G[Maker Revises Job]
    G --> C
    E -->|Yes| H[Job Approved]
    H --> I[Publish to Portal]
```

Purpose

The maker-checker process ensures no unauthorized job posting is published.

Workflow

1. HR Maker creates job requisition
2. Job saved as Draft
3. Job submitted for approval
4. HR Checker reviews details
5. Checker approves or rejects request
6. Approved jobs become publishable
7. Rejected jobs returned for correction

Controls

- Same user cannot create and approve the same job
- Audit logs mandatory
- Approval comments mandatory for rejection

6. Applicant Portal Features

Applicants can:

- Register account
- Login securely
- Verify email/OTP
- Create profile
- Upload resume

- Search jobs
 - Apply for vacancies
 - Track application status
 - Accept offers
 - Complete onboarding
-

7. Recruitment Lifecycle Statuses

Job Status

Status	Meaning
Draft	Job created
Pending Approval	Waiting for checker
Rejected	Returned for correction
Approved	Approved by checker
Published	Visible to applicants
Closed	No longer accepting applications

Applicant Status

Status	Meaning
Submitted	Application received
Under Review	HR screening
Shortlisted	Candidate selected
Interview Scheduled	Interview planned
Interview Completed	Interview conducted
Offered	Offer sent
Offer Accepted	Applicant accepted
Onboarding	Onboarding in progress
Hired	Converted to employee
Rejected	Not selected

8. Interview Management

Features include:

- Interview scheduling
 - Calendar integration
 - Interview panel assignment
 - Feedback scorecards
 - Candidate scoring
 - Recommendation capture
 - Interview outcome tracking
-

9. Offer Management

The system supports:

- Offer generation
 - Salary package configuration
 - Approval workflow
 - Digital acceptance
 - Offer expiry management
 - Offer tracking
-

10. Onboarding Process

Onboarding Checklist

- Personal information verification
 - Resume verification
 - Academic certificates
 - Professional certifications
 - Bank account details
 - Emergency contact
 - Employment contract signing
 - Access provisioning request
 - Payroll setup
-

11. Employee Conversion

```
flowchart TD
    A[Offer Accepted] --> B[Onboarding Started]
    B --> C[Documents Submitted]
    C --> D[HR Verification]
    D --> E{Complete?}
    E -->|No| F[Request Correction]
    F --> C
    E -->|Yes| G[Generate Employee ID]
    G --> H[Create Employee Record]
    H --> I[Add to Employee List]
```

After onboarding completion:

1. HR verifies all documents
2. System validates onboarding completion
3. Employee ID generated
4. Employee master record created
5. Payroll placeholder created
6. Access request generated
7. Employee appears in ERP employee list

12. Data Flow Overview

Job Posting Data Flow

HR Maker → Job Requisition → Approval Workflow → HR Checker → Approved Job → Job Portal

Applicant Data Flow

Applicant → Registration → Profile → Job Application → HR Review → Interview → Offer → Onboarding

Employee Conversion Data Flow

Accepted Applicant → Onboarding → HR Verification → Employee Creation → Employee Master List

13. Recommended Database Entities

Core entities include:

- Applicant
 - Applicant Profile
 - Job Requisition
 - Job Approval
 - Application
 - Interview
 - Offer
 - Onboarding
 - Employee Master
 - Audit Trail
-

14. Security and Governance

The system should implement:

- Role-based access control
 - Password hashing
 - Session timeout
 - Audit logging
 - Data encryption
 - Approval segregation
 - Secure document storage
 - Activity tracking
-

15. Dashboard and Reporting

Recommended dashboards:

- Open vacancies
 - Pending approvals
 - Total applicants
 - Interview conversion rate
 - Offer acceptance rate
 - Hiring funnel
 - Time-to-hire metrics
 - Recruitment trends
-

16. Final Summary

The ERP Recruitment Module provides a full recruitment-to-employee lifecycle management solution with governance controls, applicant management, onboarding automation, and employee conversion capabilities integrated into the ERP ecosystem.
